# SPI 2014 Recap

Solar Power International (SPI) 2014 concluded with strong momentum, becoming North America's only major solar energy event that's on a strong growth trajectory.

Indicative of the top solar event on the continent, coupled with an industry on the move, SPI 2014 experienced the only year-over-year growth of any major solar event, with upwards of 15,000 solar energy professionals and advocates converging in Las Vegas to attend top-tier educational programming, network with industry peers, and do business on the expansive, 200,000-plus square-foot exhibition floor. Both statistics—attendees and exhibition square footage—bested last year's figures.

This year's installment of SPI, the annual event of the Solar Energy Industries Association (SEIA) and the Solar Electric Power Association (SEPA), was a newsmaker on several fronts, from companies launching new products on the show floor to major industrywide initiatives. SEIA and SEPA both made headlines with announcements that promise to alter the industry landscape—underscoring how SPI serves as the industry's annual town square where solar energy professionals gather, business gets done, and news is made.

SPI 2015 will return to the West Coast, September 14-17, in Anaheim. The conference has already signed up 275 exhibitors for more than 150,000 square feet of show floor space—75 percent of this year's total.
